Summary

Business Information Systems student and aspiring Junior Data Analyst with hands-on projects in SQL Server, Power BI, DAX, Power Query, Excel and Python. I start from the business question, validate the data before trusting it, and turn the results into dashboards and recommendations that support decisions.

Projects

PharmaPulse Analytics – End-to-End Pharmacy Analytics *Digitera Program*
Python, Power Query, SQL Server, Power BI, DAX
github.com/NADA-ELSAYED909/PharmaPulse-Analytics

- Merged 3 sales files with different columns and two date formats using Python and Power Query, removing 50 duplicate rows and 42 duplicate customers.
- Validated the data with 22 SQL Server queries (joins, CTEs, window functions) and reconciled totals across Python, SQL and Power BI.
- Built a star schema with DAX KPIs and a 4-page dashboard (overview, loss sales, inventory, discounts) for a 12-store chain.
- Found that discounts above 15% cut the margin to 21.3% vs 40.9% at 0–5%; recommended capping discounts near 15% with approval above it.

Marketing Analytics Dashboard
Power BI, DAX, Power Query, Excel
github.com/NADA-ELSAYED909/Marketing-Analytics-Dashbard

- Built a star-schema model with DAX measures for ROAS, CAC, CLV, conversion rate and funnel metrics across 5 report pages.
- Showed that revenue fell 22.7% year over year while spend fell only 12.3%, and that Google Ads had the best ROAS (7.96) but the smallest budget share.
- Found that returning customers (26.9% of customers) generate 73.1% of revenue.

Education

Benha University *Oct 2024 – Expected 2028*
Bachelor of Business, Business Information Systems (BIS)

Certifications

Digitera Program – Business Track, iCareer, Plan International Egypt *Sep 2026*
Data Fundamentals, IBM SkillsBuild *Aug 2026*
Associate Data Analyst in SQL, DataCamp *Mar 2026*
Advanced SQL, 365 Data Science *Mar 2026*
Data Analytics (120 hours), ITIDA and NTI *Jul – Aug 2025*
Data Science & AI Bootcamp (36 hours), Google Developer Groups, Benha University *Jan 2025*

Skills

Data & BI tools	SQL (SQL Server), Power BI, DAX, Power Query, Excel (Power Pivot), Python
Methods	Data cleaning, data modeling (star schema), exploratory analysis, dashboard design
Soft skills	Critical thinking, teamwork, communicating insights
Languages	Arabic, English
